WATER AND AIR POLLUTION ROBO

February 5, 1968

Dear :

In the last session of Congress I introduced a measure to modernize and tighten up the provisions of legislation dealing with lake pollution and I have been giving careful attention to continuing studies of air pollution so that methods can be devised to protect the air we breathe from the increasing incidence of health hazards.

This problem is one of major importance and I will continue to support good legislation for pure water and pure air.

Sincerely,

Everett McKinley Dirksen
